

The perfect solution to protect your farm and fish production

The farmer can manage his farm via the Internet through the integrated WiFish system and calculate his farm's future requirements and predict his profits.

Benefits of WiFish device

- Make your appropriate decision with the solution at the right time before any losses occur in the fish crop.
- Increase fish production
- Avoid fish deaths
- Save the feed used in your farm
- Monitor your farm instantly and continuously

The features of WiFish

pH sensor

Range: 0 – 14

Dissolved Oxygen sensor

Range: 0 – 20 mg/L

Temperature sensor

Range: -55 – 125 C

Average life expectancy

4-5 years

Average cable lengths

3-5 meters

Control Unit

You can control fish tank equipment such as ventilation units (switches, crystals, etc.) and control the water temperature (heaters) that fish tanks need based on the continuous measurement of the air mass, which ensures the preservation of An ideal environment that ensures high quality and production of fish tanks.
